Summary inputs
Community reports
Multi-topic. An entity spanning several topics is filed under one community.
Boundary. Entities of a relationship fall in two communities.
Outside. Entities outside the largest component are never clustered.
Selection. Standard builder offers one relationship per entity.
Budget. Items cut at the first overflow of 8,000 tokens.
Sub-summary. An oversized parent is written from its children's summaries.
Loss audit. Exact out-of-scope set per level, no LLM calls.
Bridge records. Boundary relationships written into both inputs.
Two-tier input. Full items to fB, compact facts to B.
Residual store and certificate. Every relationship accounted for.
